[if P then (Q and R) else [(not Q) and S]] if and only if [if Q then (P and R) else [(not P) and S]]

Andaikan pernyataan **FALSE**, artinya memiliki 2 kemungkinan:

b.) If P then (Q and R) else [(not Q) and S] = False, then  
If Q then (P and R) else [(not P) and S] = True.

$P = \text{True}$ ,  $Q$  dan  $R = \text{harus True}$ , jika  $Q$  True maka  $[(\neg Q \vee Q) \wedge S] = \text{False}$ .

$P = \text{True}$     $S = \text{True}$

3.)  $P = \text{False}$ ,  $(Q \wedge R) = \text{True}$ ,  $(\text{not } Q) \wedge S = \text{True}$ . maka, untuk menghasil-  
kan  $Q \wedge R = \text{True}$ ,  $Q$  dan  $R = \text{True}$  dan  $\text{True}$ , maka  $(\text{not } Q) \wedge S = \text{False}$ .

$(\neg Q) \wedge S = \text{True}$ ,  $Q = \text{False}$   $S = \text{True}$  dan maka  $P = \text{bisa F/T}$

~~Program demikian, F V T V T V T - true.~~

Dengan demikian,  $T \vee T \vee T \vee T \vee T = \text{True}$ .

(not Q)  $\wedge$  S = True harus  $Q = \text{False}$   $S = \text{True}$ , maka  $P = T/F$

$= \text{if } F \text{ then } F \text{ else } F = \text{False}$ . Terjadi kontraksi (T)

2.)  $P = \text{True}$ ,  $Q$  and  $R = \text{False}$ ,  $(\text{not } Q)$  and  $S = \text{False}$ . maka jika  $(Q = \text{True})$ ,  
 $R = \text{T/F}$ ,  $S = \text{T/F}$  → kemungkinan ada 4. ( $P, R, S = -T, T, T - T, T, F, T$   
 $- T, T, T, F - T, T, F, F$   
~~Masukkan ke  $\text{if } P \text{ then } (T, F, F)$~~

Masukkan ke pernyataan b. kedua :

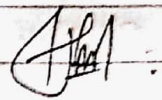

- 1.) if T then  $(T \wedge T)$  else  $((\text{not } T) \wedge T)) = \text{True} \rightarrow$  Karena True
- 2.) if T then  $(T \wedge T)$  else  $((\text{not } T) \wedge F)) =$  dan tidak
- 3.) if T then  $(T \wedge F)$  else  $((\text{not } T) \wedge T)) =$  per terjadi
- 4.) if T then  $(T \wedge F)$  else  $((\text{not } T) \wedge F)) =$  kontradiksi (F)

Dengan demikian pernyataan 1 dan 2 (a, b)  
maka  $T \vee F = \text{True}$ .

Pernyataan harus dibalik dan harus diingkar.  
sehingga. pernyataan tersebut VALID.

2. b.)  $uy' + yz + uz'$  :

$$\begin{aligned} \text{a.) } uy' + yz + uz' &= uy' + uz' + yz \\ &= u(y' + z') + yz && \rightarrow \text{Hk. Distributif} \\ &= u.(yz)' + yz && \rightarrow \text{Hk. De Morgan} \\ &= u.(yz)' + yz(u + u') && \rightarrow \text{Hk. Komplemen} \\ &= u(yz)' + yzu + yz(u') && \rightarrow \text{Hk. Distributif} \\ &= u(yz)' + yz(u') + yzu && \rightarrow \text{Hk. Komutatif} \\ &= u(yz)' + (u')yz + uyz && \rightarrow \text{---} \\ &= 1 + uyz = uyz + 1 && \rightarrow \text{Hk. Komplemen} \\ &= 1 && \rightarrow \text{Hk. Dominansi} \end{aligned}$$

③  $f(w, u, y, z) = \sum m(0, 2, 4, 5, 6, 7, 8, 10, 13, 15)$

a.) SOP :

$$f(w, u, y, z) = w'u'y'z' + w'u'yz' + w'uz'y' + w'uz'y + w'uzyz' + w'uzyz + wxy'z' + wxy'z + wxyz' + wxyz$$

b.) Peta Karnaugh :

$wu \backslash yz$	00	01	11	10
00	1	0	0	1
01	1	1	1	1
11	0	1	1	0
10	1	0	0	1

c.) K-Map =

Hasil minimisasi =  ~~$w'z + wz + u'z + w'u'z$~~   
=  $w'z + uz + wz'u'$
